***Priority***

An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification or in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)). The specific reference to any prior nonprovisional application must include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 39-40, 47-48, 50-52, and 54-56, 58 are rejected under 35 U.S.C. 102(b) as being anticipated by Jones et al. (US 5663608).

Regarding claims 39-40, Jones discloses an integrated circuit (see Figs 5-7, & Fig 27) including a substrate (10,452) comprising silicon (lines 45-47 of column 5), a first device (multiplicity of emitter 472 of Fig 27), a second device (a conductive grid gate 466), a second layer of material (a dielectric layer 458, 460, 462, 464) comprising silicon (line 40 of column 18), a conductor layer (454) electrically connecting the first device (emitters) to the second device (gate), at least a portion of the conductor

Art Unit: 2879

disposed adjacent to the first layer (substrate 452), the conductor including a first portion comprising chromium and a second portion comprising aluminum (lines 59-60 of column 18).

Regarding claims 48, 50, 52, 54, 56, 58, Jones discloses that the first conductive material comprises chromium and second conductive material comprises copper (lines 59-06 of column 18, & lines 32-33 of column 17).

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 38-40, 47-49, 51-53 & 55-57 are rejected under 35 U.S.C. 102(e) as being anticipated by Raina et al. (US 6657376).

The applied reference has a common Inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 38-40, 47, 51 and 55, Raina et al. disclose an integrated circuit including plurality of devices (see Fig 1), a first layer of material comprising silicon (layer 54 of Fig 8, comprising silicon dioxide), a second layer of material comprising silicon (layer 66 comprising silicon dioxide), a first device (emitter tip 64), a second device

Art Unit: 2879

(gate electrode 68, 70), and a conductor (56), the conductor electrically connecting the first and second devices (see relevant descriptions of Fig 4-8) at least a portion of the conductor being disposed between the first and second layers of material (see Fig 8), the conductor including a first part, a second part, and a third part, the first and third parts comprising chromium, the second part comprising aluminum, (lines 14-18 of column 5) the first part being disposed between the first layer of material and the second part, the third part being disposed between the second layer of material and the second part.

Regarding claims 48-49, 52-53, & 56-57, Raina et al. disclose that the first conductive material comprises chromium and second conductive material comprises aluminum.
